Topics (Agenda)

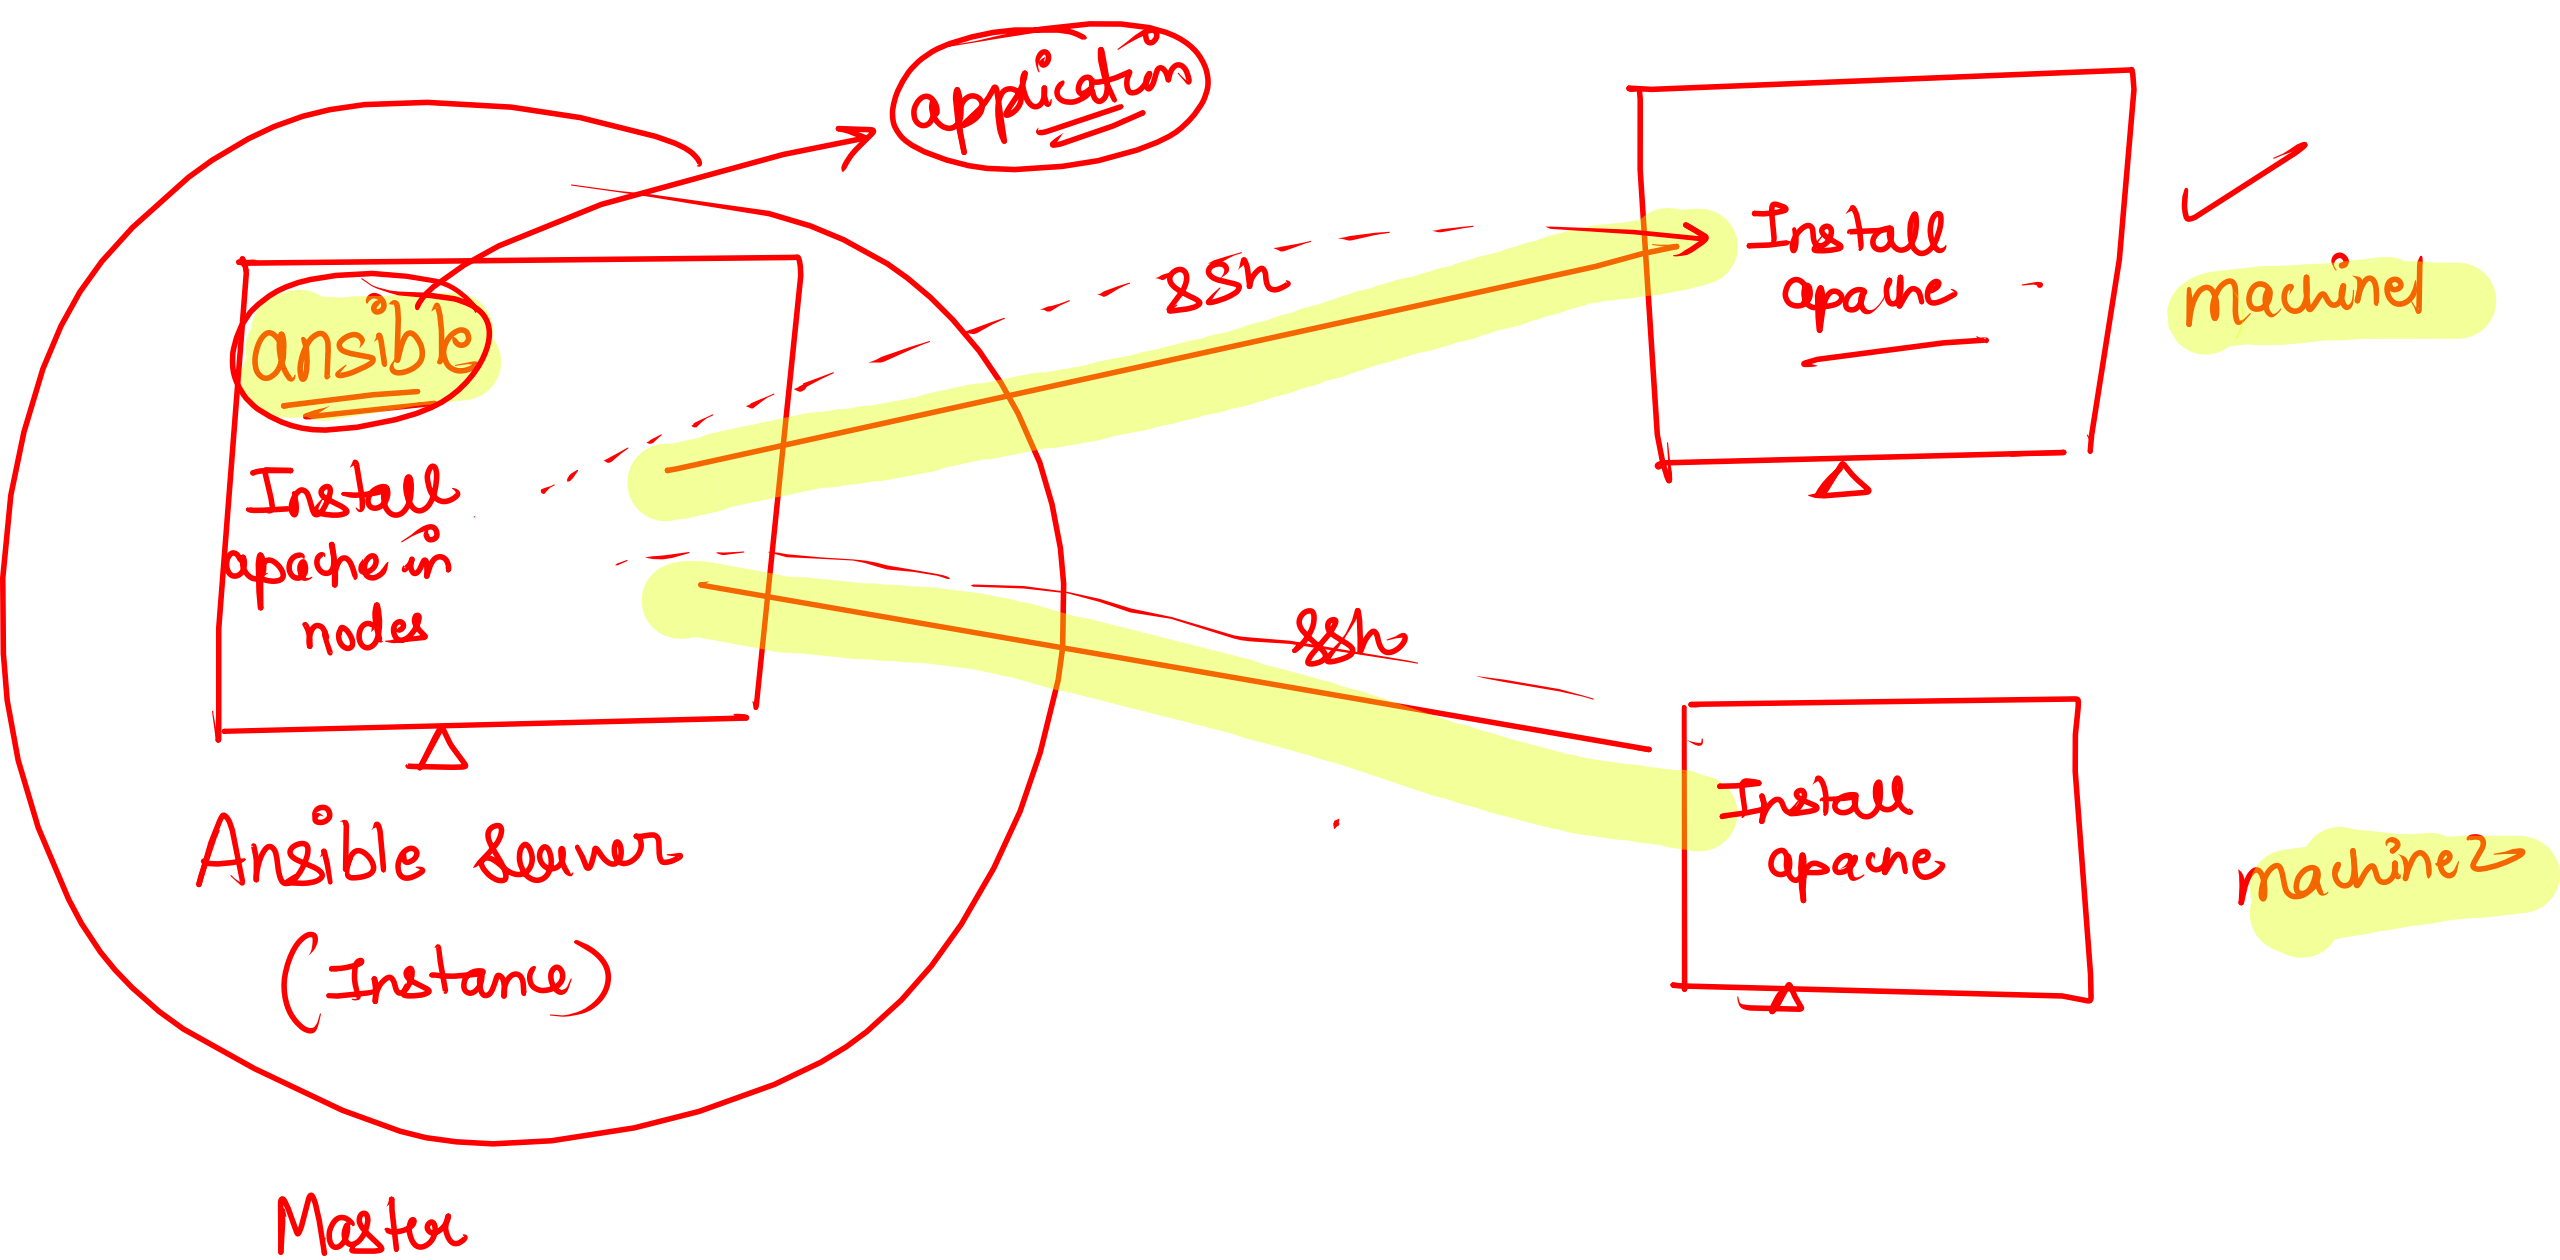

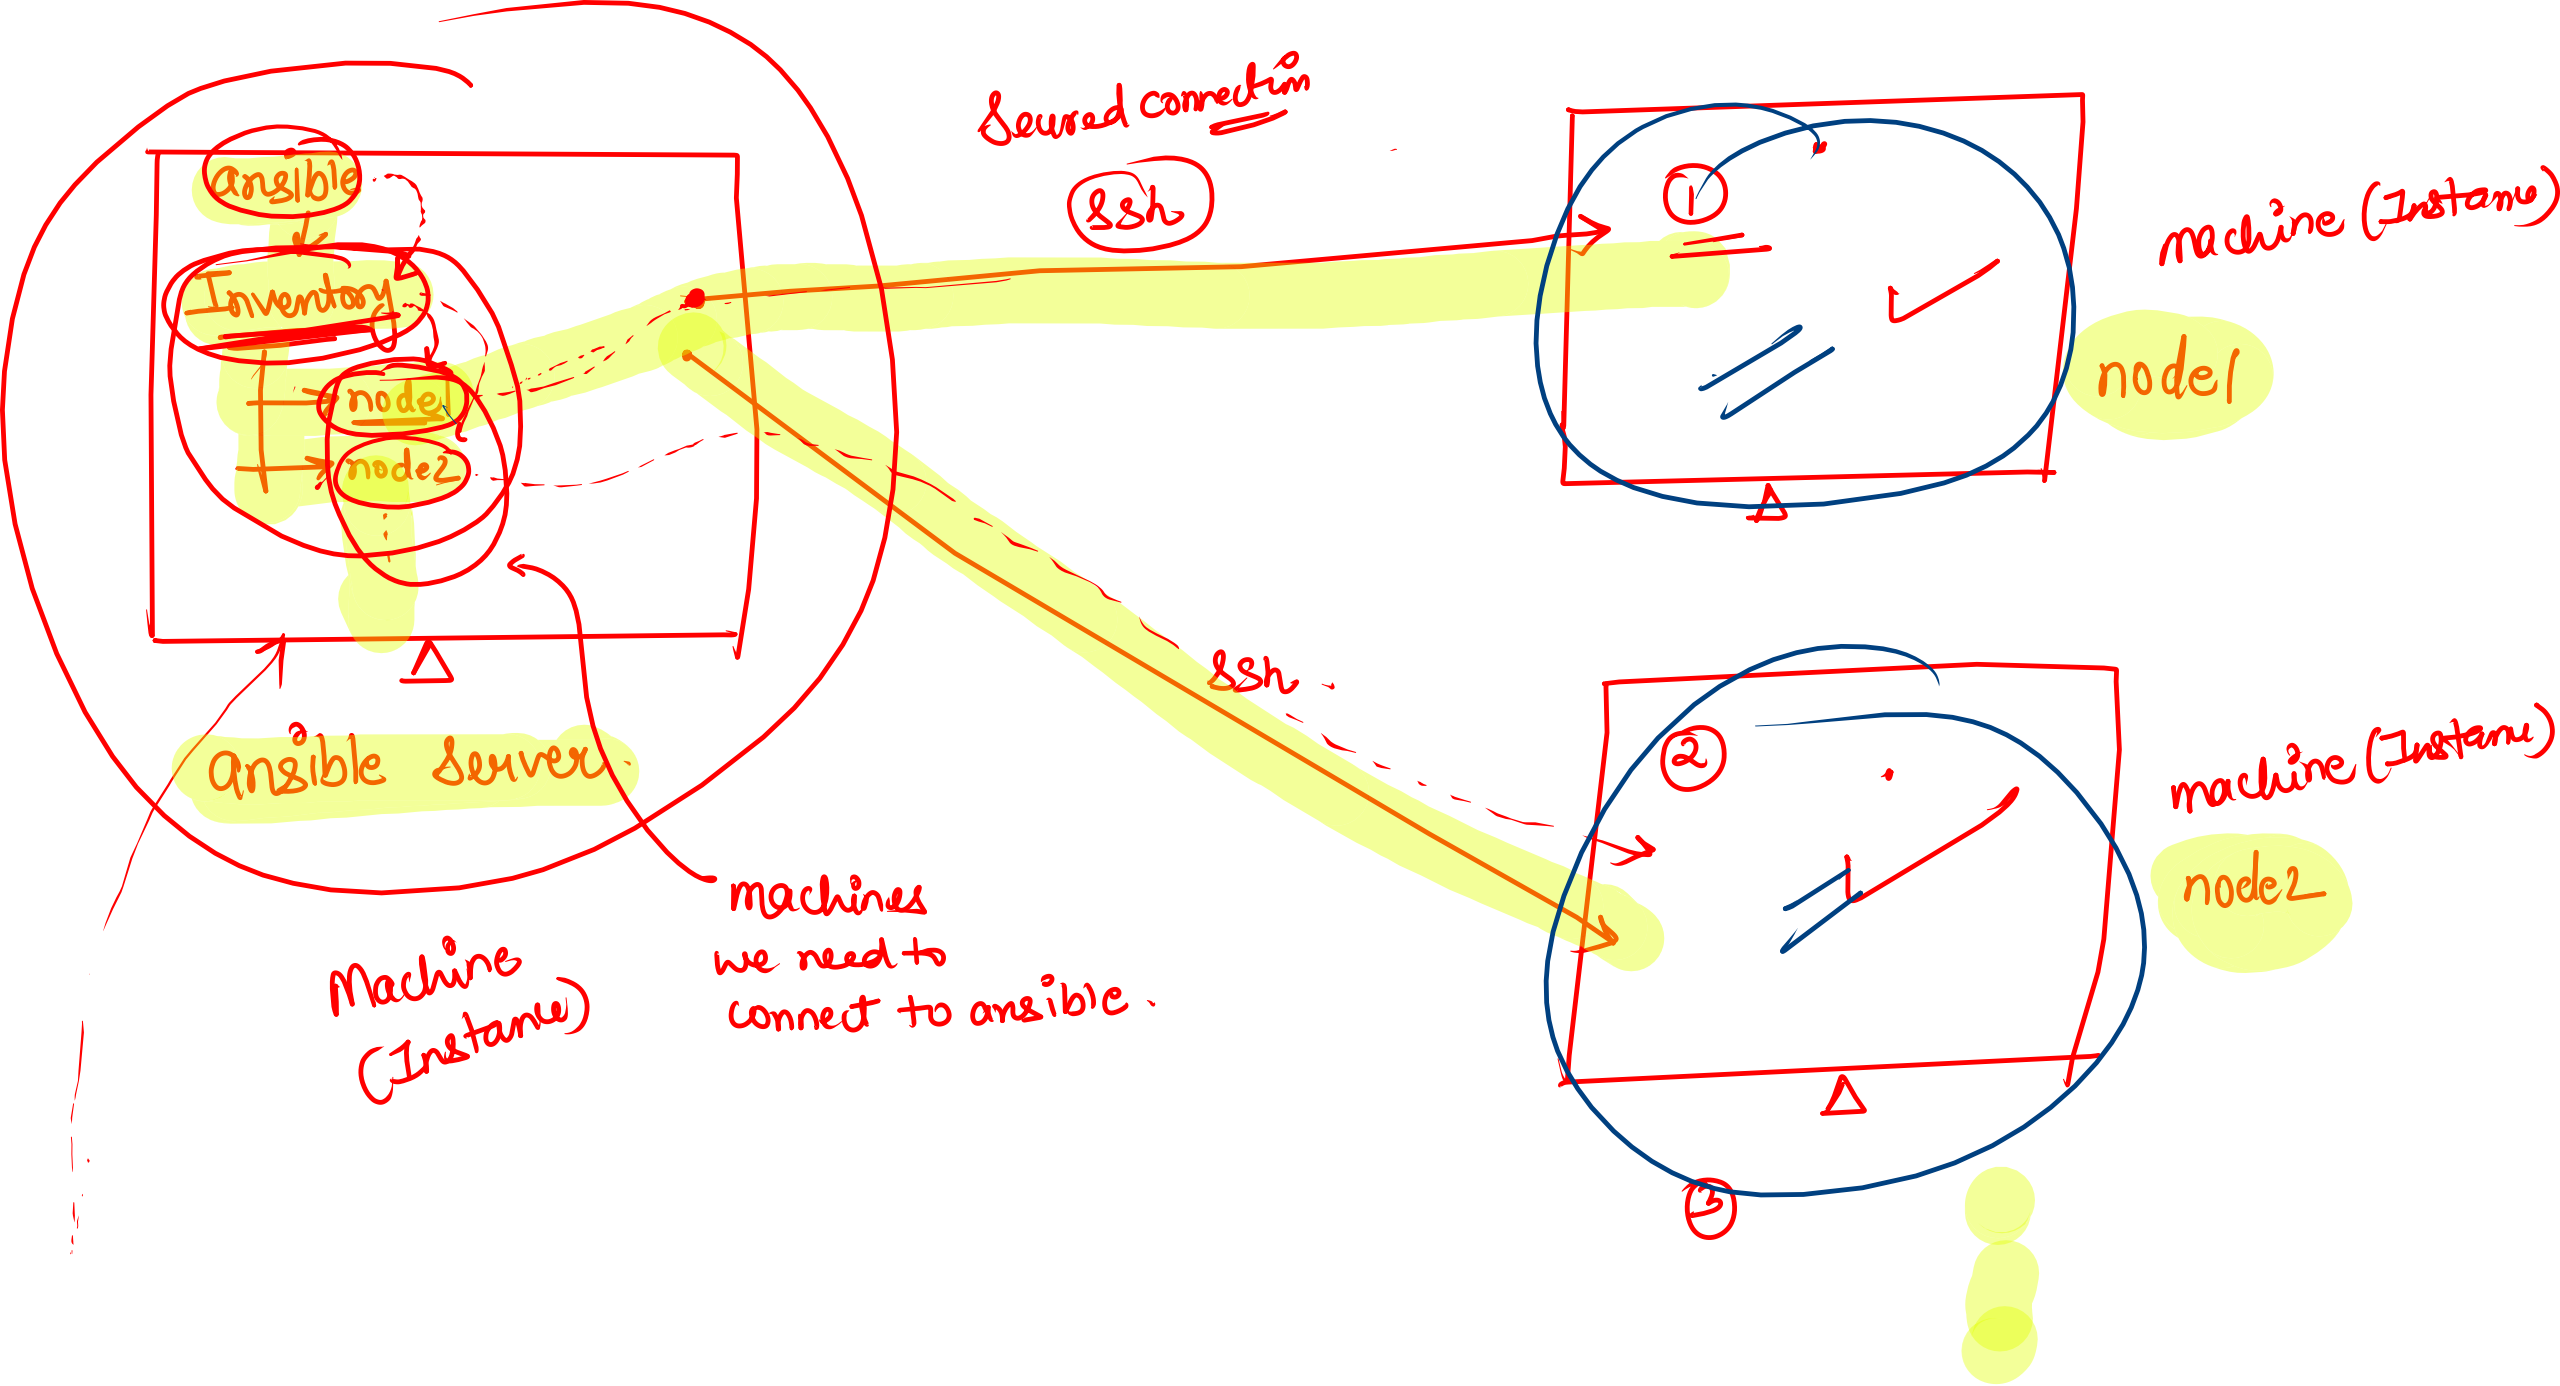

Agentless automation &
configuration tool

Robot: Install the s/w in
all the machines

I need to give instructions to ansible server & it will do task for me by ~~connect~~ ssh connection to nodes.

Ansible is agentless automation & configuration management tool used to configure, deploy machines.

Ansible

Open Source Tool

Configuration management

Ansible playbook

- nginx
- Java
- some files
- permission

Secure Shell

(ssh)

ssh

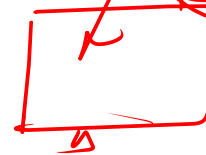

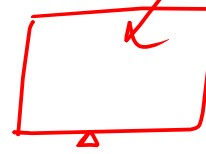

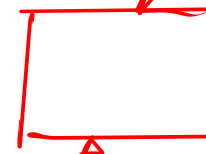

ansible

ansible server

node1

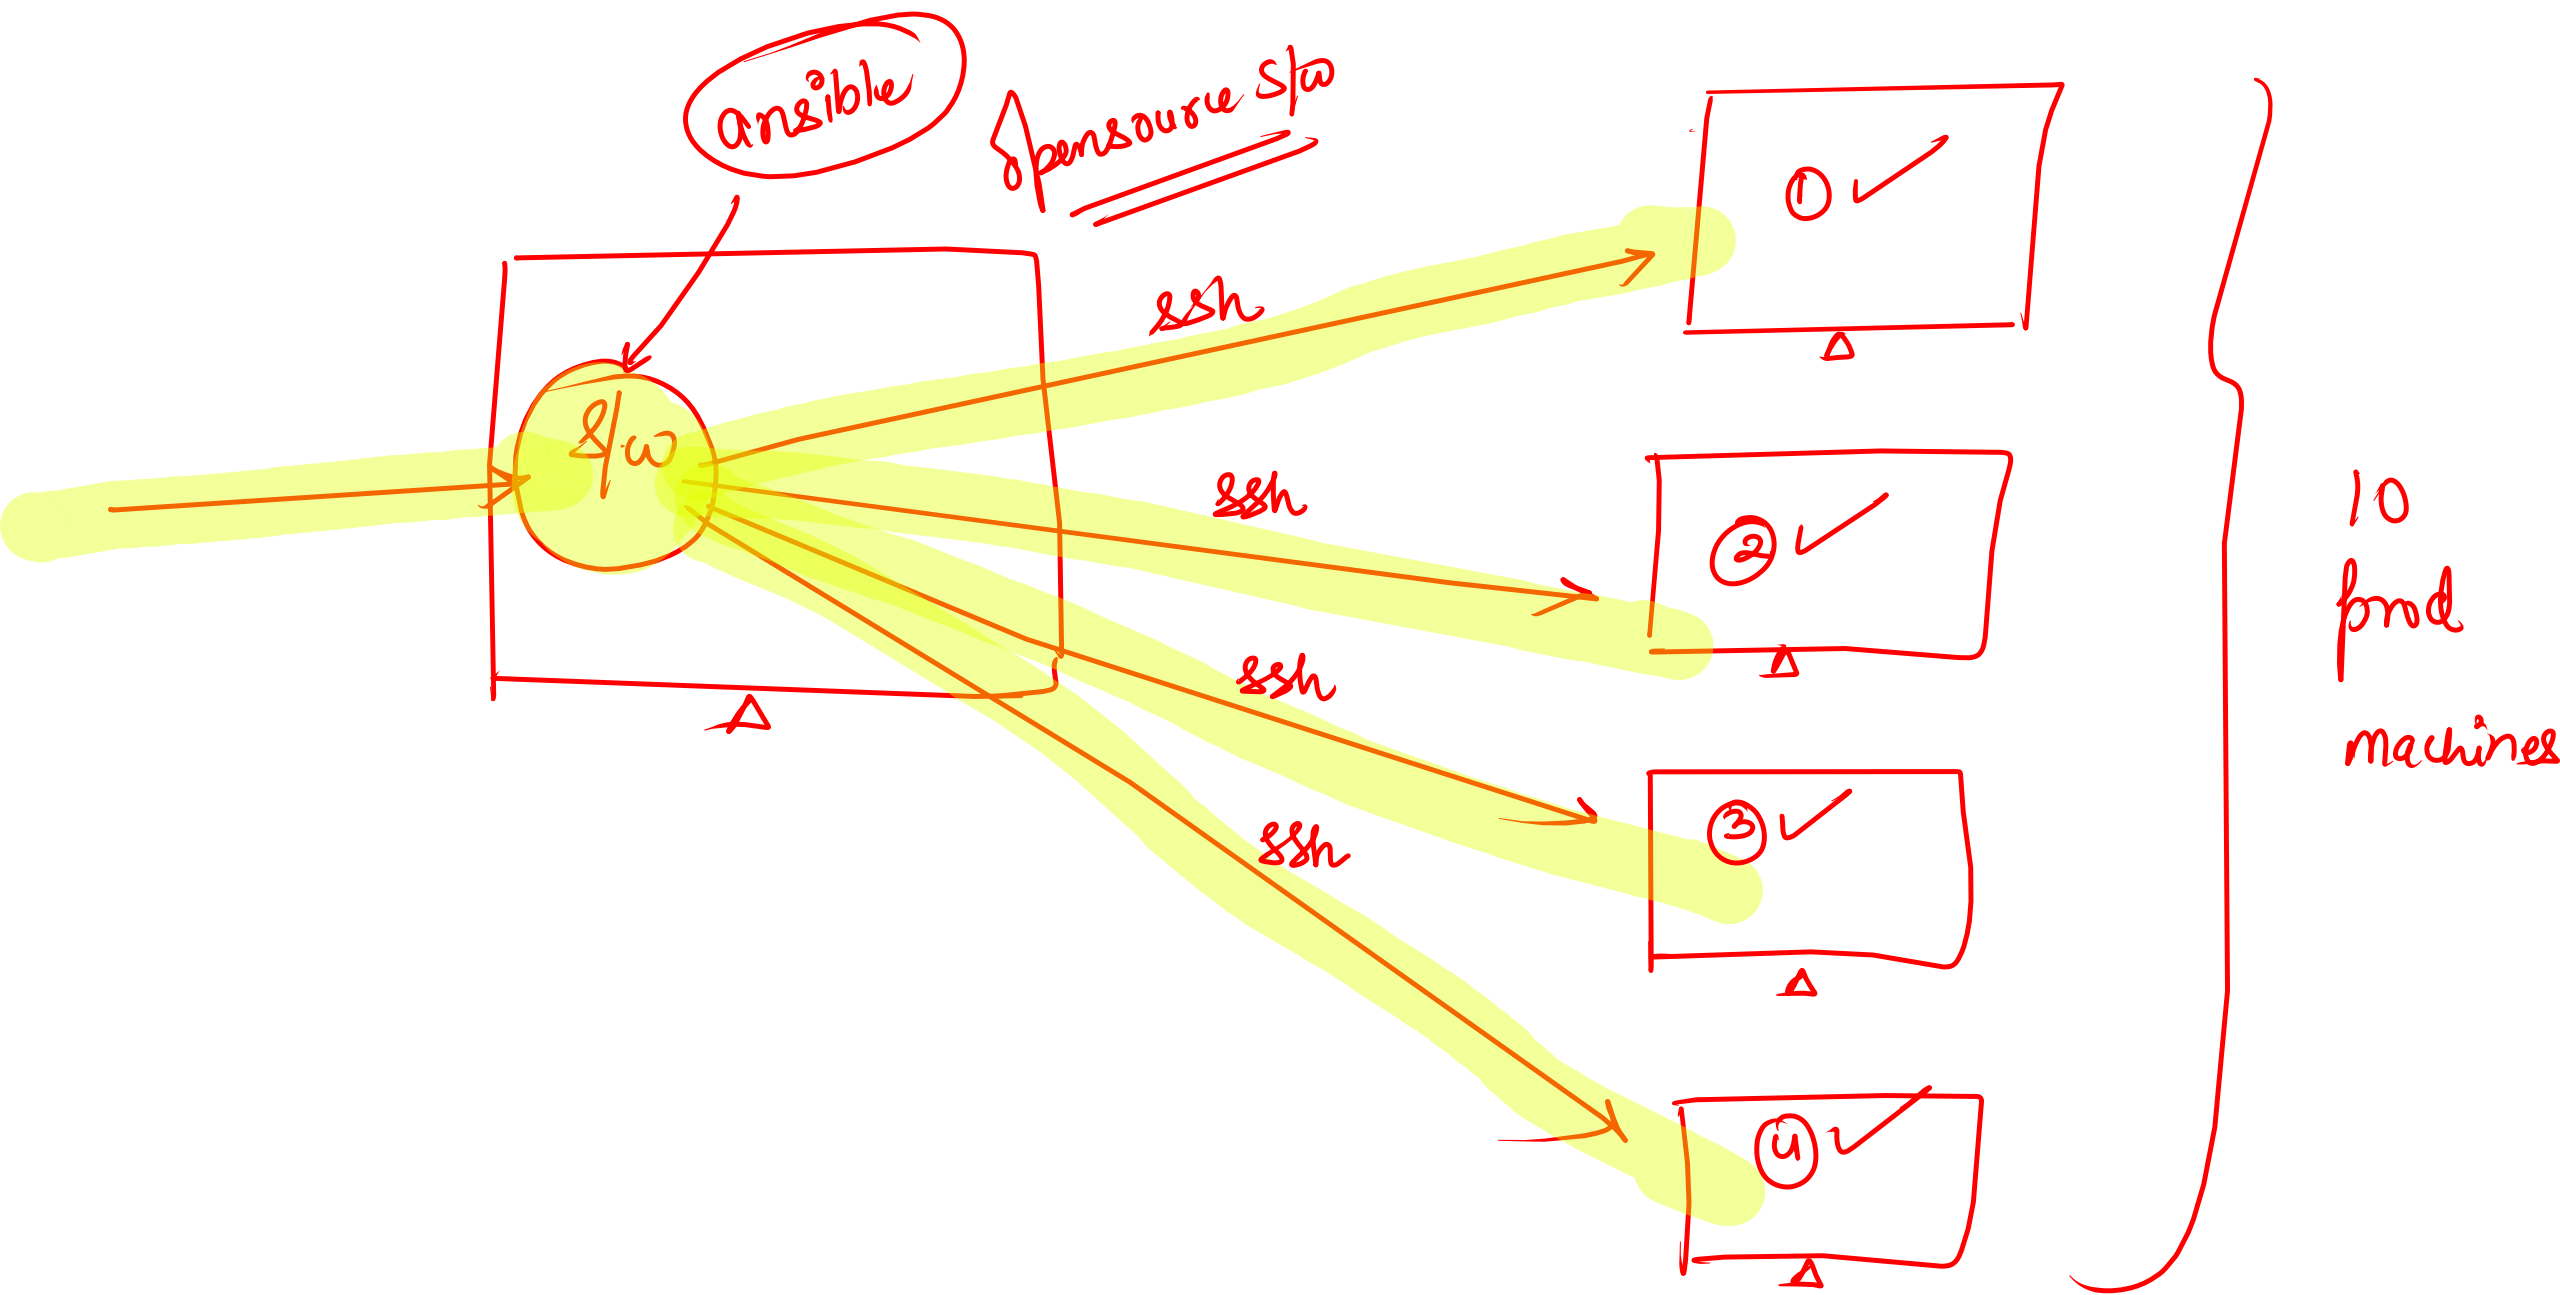

node2

no ansible related agent will be installed in nodes.

10 servers

nginx, Java, some configuration files, some permission

Ansible

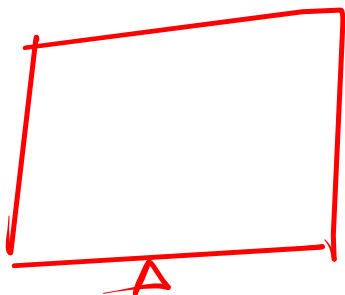

IAC Tool

Infrastructure as a code

Practice of defining, creating, provisioning & managing the Infra through some code

Code

Create Infra by writing code

AWS → Instances, Storage . . .

configure / manage the Infra

↳ you can install update sw, package inside the machine.

Infrastructure as a code

(IAC)

(create/manage/configure Infra
by writing code)

Create Infrastructure

AWS instance, Storage,
database

Write code

Execute the code

↳ Infra created

configure Infra / manage Infra through code

Write the code

↳ Execute the code

↳ SW Installed in machine

Ansible

~~create~~

~~manage~~

~~configuration management~~

Terraform

~~create~~

~~manage~~

~~configuration management~~

any kind
of solution

↳ weak

Ansible Server

- Ansible
- configure Inventory (hosts)
 - ↳ node1, node2
- Create a user (devops)
 - ↳ sudo permission
 - ↳ SSH & configuration

△
EC2 Instance

- create a SSH keygen

How we will install
ansible !!

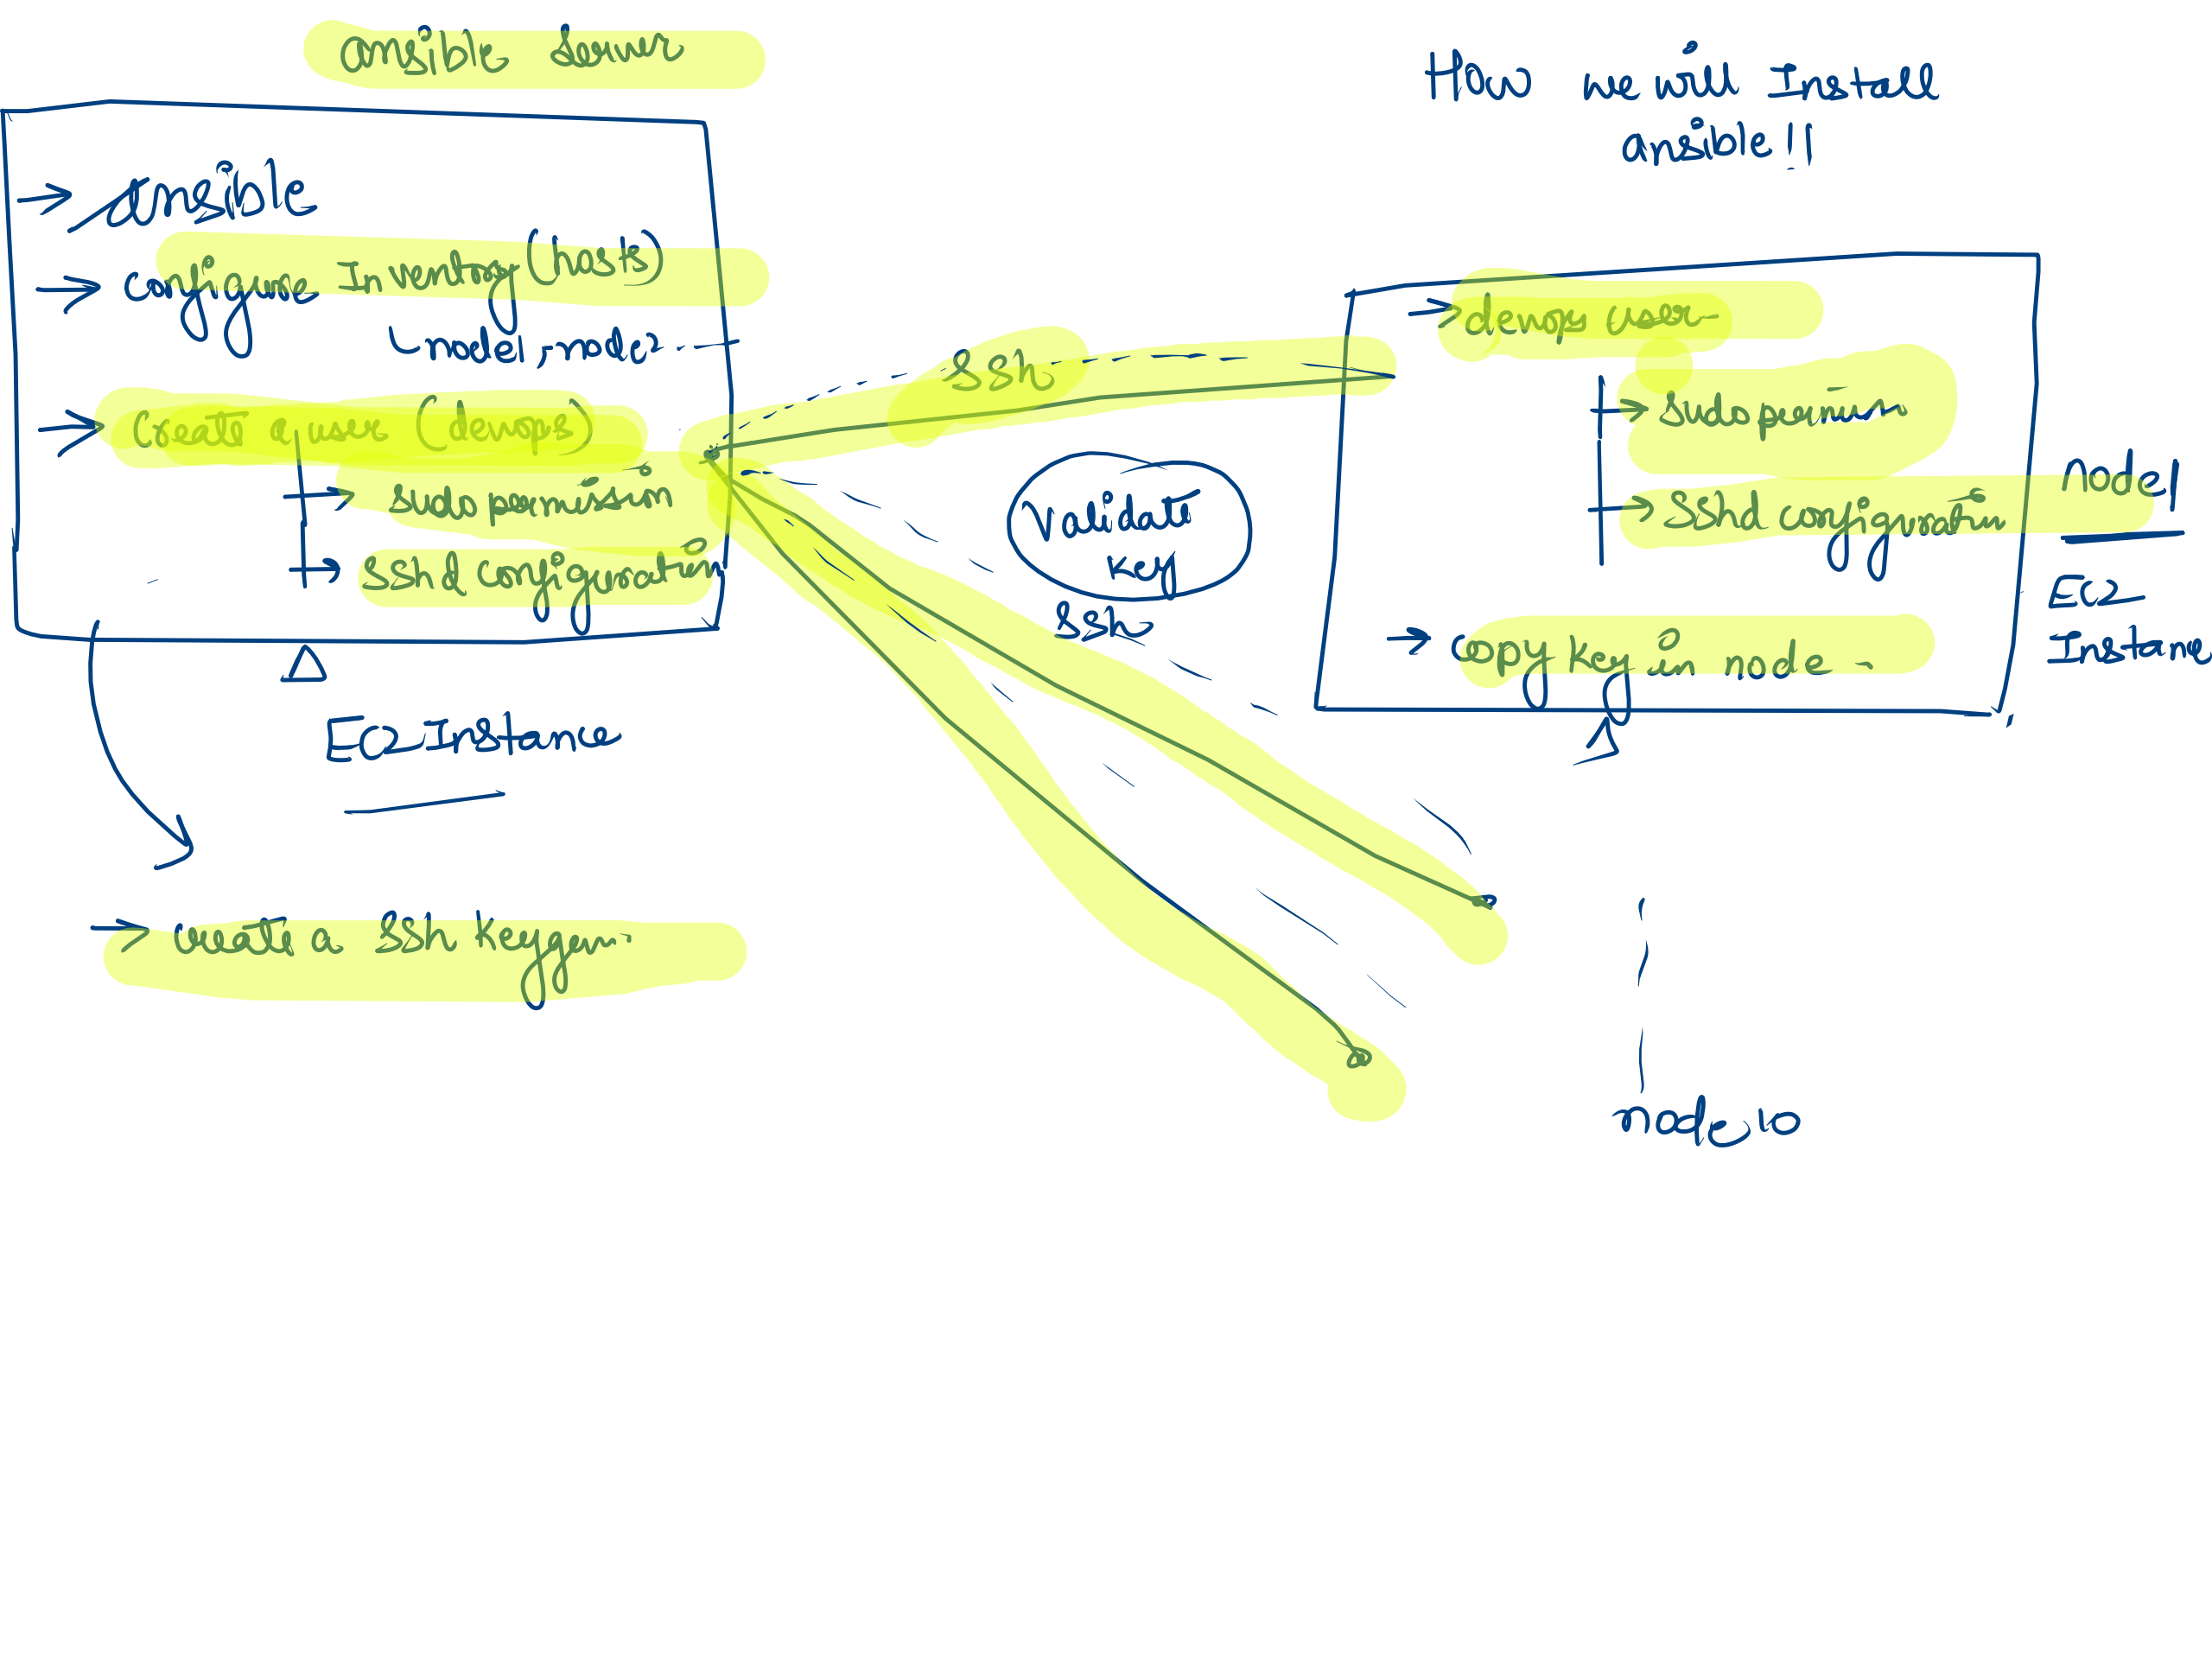

- devops user
 - ↳ sudo permission
 - ↳ SSH & configuration
- copy key in node -

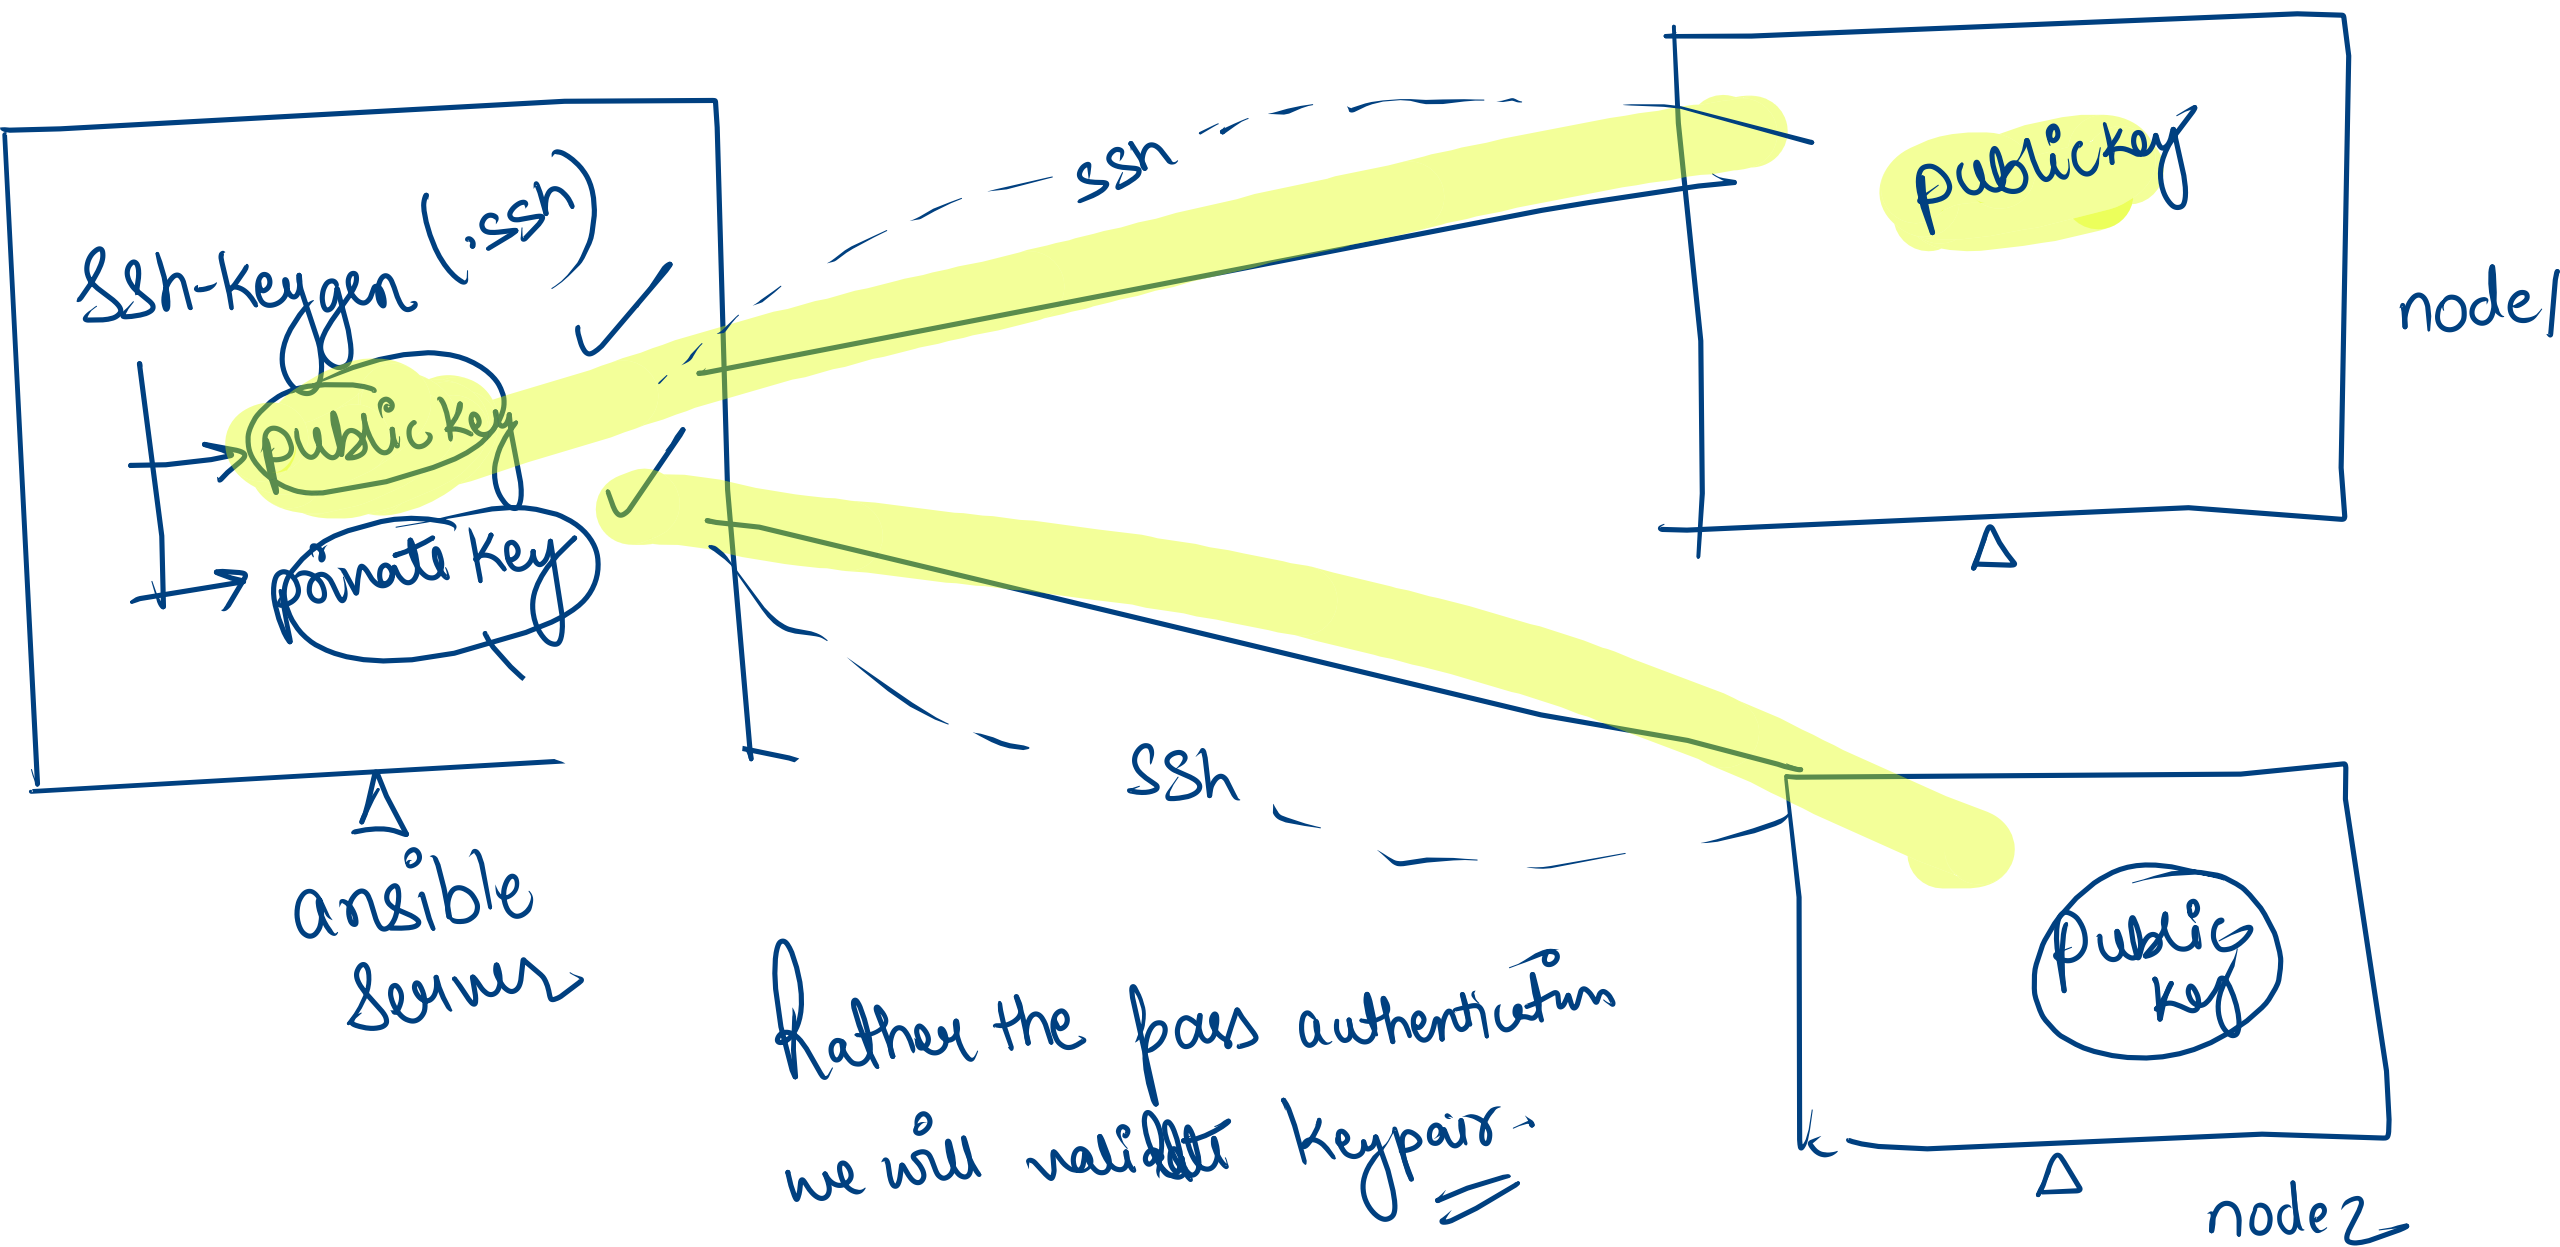

node1
EC2 Instance

Validate
key

SSH

node10

①

Idempotency

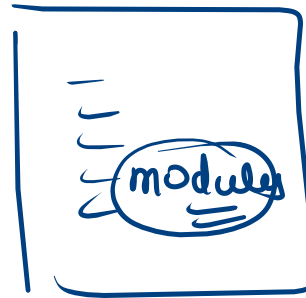

points about ansible

e.g If a s/w is already installed, ansible will not reinstall it.

ansible
server

ansible playbook

file which consist of
task we need to perform
in nodes

Install apache
Install docker

ansible-playbook playbook.yml

Run the file

node
